Specification

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC.
- (f) **BACKGROUND OF THE INVENTION.**
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) **BRIEF SUMMARY OF THE INVENTION.**
- (h) **BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).**
- (i) **DETAILED DESCRIPTION OF THE INVENTION.**
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (l) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent

granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5 and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Van (2002/0156619).

As to claim 1, Van teaches a method for encoding an audio signal where the audio signal is represented by codes separated into plurality of components, comprising the steps of:

Transforming the audio signal into transformation parameter (spectral characteristics), determining some section of the spectral representation in the parametric representation as non deterministic (noise);

generating noise parameter from the section of the parametric representation;

And

Representing the audio signal as the combination of the coded audio signal as well as the coded noise signal (Par.0021-0026, 0032; Fig.1).

As to claim 2, Van teaches where the transformation parameter include prediction coefficients (Par.003, 0027, 0006).

As to claims 3-5, Van teaches where the transformation parameters include the spectral shape, amplitude, frequency or phase of the audio signal.

with regard to claim 10, the corresponding audio encoding device is analogous to the method in claim 1 and is rejected by Van for the foregoing reasons.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 12 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The invention 'audio signal' doesn't fall within at least one of the four categories of patent eligible subject matter namely Process, Machine, Manufacture or composition of matter.

Allowable Subject Matter

Claims 6-9, 11 and 13 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: the claims are allowable because Van doesn't teach the process means for generating a second audio signal by removing from the noise signal the spectro-parameter parts of the audio signal that are already contained in the first audio signal as recited in the claims.
